

FLEXIBLE BOLLARDS: POLYURETHANE COLOR OPTIONS

Polyurethane flexible bollards are made from durable polyurethane plastic, and designed to repeatedly bend under vehicles, up to 90 degrees, without losing their shape or form.

ABOUT POLYURETHANE

The coloring permeates throughout the material, so any bending and flexing can occur without cracking a color coat. Impacts will result in minimal visible scratches, scrapes, or dents. All bollards feature UV protection to prevent fading in sunlight and minimize maintenance.

COLOR OPTIONS:

Flexible bollards ship in standard black to complement any contemporary or traditional architectural and landscape design. Other standard color options require an additional 12 weeks for processing and delivery. All flexible bollards are available with optional reflector strips in 1 of 3 colors to increase visibility in low-light and adverse weather conditions.

Note: Color swatches are approximations only.
